1

Clean the top of vial with an alcohol swab.

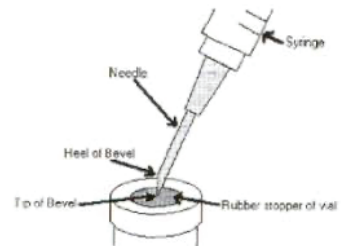

2

Remove the syringe from the packaging. Attach or tighten the provided needle.

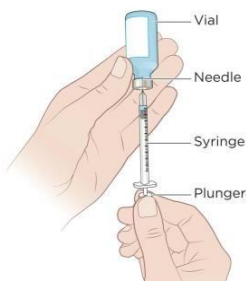

3

Slide the cover off the needle and insert the needle into the vial with the bevel facing upwards.

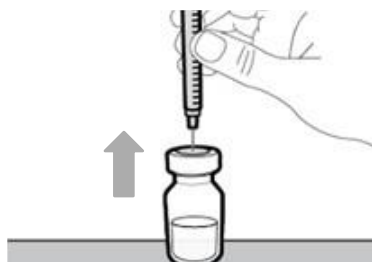

4

Flip the syringe and vial upside down and pull back on the syringe until you have drawn up your dose.

5

Flip the vial right side up and withdraw the needle from the vial.

6

Tap the syringe to bring any air bubbles to the top.

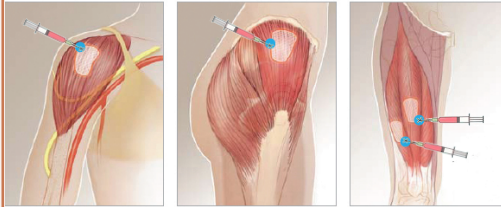

7

Push the plunger up to expel the air until you see a tiny drop of the medication come out.

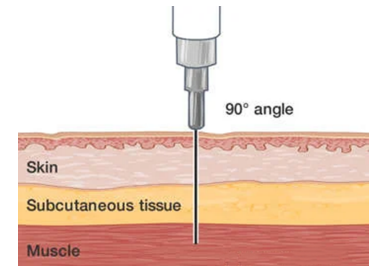

8

Locate your injection site and clean with an alcohol swab. Your doctor will instruct you on the best injection site. Below are some examples:

9

Inject slowly at a 90-degree angle. Injection should take 30-60 seconds.

10

Remove and dispose needle properly in sharps container.

11

Apply a band-aid to injection site.

12

Store the vial as indicated on the packaging.

Please contact the pharmacy for more information on mixing and injection.
